LightScribe
Laser-etched labeling

BURN CUSTOM LASER LABELS DIRECTLY IN YOUR CD/DVD DRIVE

PROFESSIONAL SILKSCREEN QUALITY

LightScribe is an innovative new technology that allows your disc drive to burn silkscreen-quality labels directly onto CDs and DVDs with a laser instead of a printer. It uses your drive's existing laser to deliver precisely controlled light energy images through a revolutionary new circular writing system, which causes a visible, chemical change in the dye coating that lasts.

CUSTOM LABELS WHEREVER & WHENEVER

No printer, permanent marker or adhesive labeling is required to make fantastic labels wherever and whenever burning occurs – at home, in the office or on the go. Creating your own labels can be a convenient, hassle-free, fun activity with LightScribe. Because these labels are laser etched, no ink cartridges are used and you can even add text and graphics to a previously burned disc again and again.

AS EASY AS BURN, FLIP, BURN

LightScribe uses a combination of your CD or DVD drive, specially coated discs, and enhanced disc-burning software to produce precise, professional looking labels. After burning data onto your disk, just flip it over and burn a high-resolution label directly on the upper side of the disc. The result is an impressive iridescent image composed of art, text, or photos of your own creation.

YOUR DISK IS YOUR LABEL

LightScribe represents a great value for users who see creativity, the ability to express themselves, and simple tools and approaches as paramount. Make your mark using your own creations. Burn original designs onto your CDs and DVDs for labeling gifts, photo archives, music mixes, or business presentations. Now you can create labels that are as professional and unique as you are.

Built for Mac OS X

COMPATIBLE WITH WINDOWS®

lightScribe DIRECT DISC LABELING

- Professional, silkscreen-quality images that last
- No-hassle labels without printers, markers or stickers
